

THE GOD-MIND

The frequency for low wave length (audible, relatively quiet) is 3 kHz. For cell phones (WiFi, Aircards, iPads, et al) the frequency is just under 3 GHz or 1,000,000 times as fast. Brain wave in the alertness level is 20-40 hz. Now if **alert** phase brain-wave frequencies are 20-40 hertz, certainly spiritual communication is even less than that (or in a completely different mode altogether). To prove this point, I have found when my thoughts are in neutral (a most difficult state to achieve) I receive the deepest of insights, whether the solving of a geologic problem or a particular spiritual insight.

Again comparing the normal alert level brain wave frequency to those of the iPad/cell phone frequencies, the ratio is 3 Gigahertz (3 billion oscillations per second) to 30 hertz (30 oscillations per second), or 100,000,000 times as fast. No wonder our spiritual receivers are seared!

Significantly, the extreme 'right' end of the wave spectrum is dubbed 'cosmic'. "Cosmos" is another biblical root word for Satan's domain, utterly fast. Does 'church' noise come into focus? By contrast, at the other end of the spectrum are Power Waves, or 'dynamos', the Greek word for power, used in places to describe the Holy Spirit. Coincidence? -I think not.

Copernicus, Newton, Leibnitz, Einstein, the great poets, and other creative persons all had learned this secret of silence. Indeed, just this morning by the pond all was quiet, only the hundreds of birds were singing (the audible range). The water surface on the pond was still, allowing much to be seen under the surface. I sensed a Presence.

Any cell phone related apparatus of such high frequency tends to pull our mind into that speed, or in the least travel through our minds, unconsciously erasing the low frequencies used to enter the domain of the Most High. On I-pads, -pods and -phones: the greater use and dependence, the less the ability to think, ponder, meditate and originate creative thought. This is due to these devices housing the bulk of current knowledge, e.g. conventional knowledge. Conventional knowledge is easily proven to be wrong 75% of the time, regardless of the field of endeavor.

Thus the human brain is being saturated with bogus data, notwithstanding the atrophy of the creative imagination. Moreover, the high frequencies associated with such devices are displacing the lower frequencies (?) in the brain necessary for creative thought. The former is digital, the latter analogue. The God-mind is being systematically destroyed at an increasing rate of declension.

Mental inundation and preponderant use of high-frequencies wipe out our innate ability to ponder and imagine, both of which are very low frequency. As it is written in Is. 26:3, God will guard and keep you in perfect peace (shalom-shalom) whose mind is stayed on Thee. 'Mind' here means creative imagination. It is patently obvious that the obverse is true; we will not be kept in perfect peace, neither will our minds nor our bodies be at peace, or in a healthy state.

To ponder is the greatest avenue towards correct thinking and by extension, correct being. In my mind is the single gift given me whereby I might commune with Him, on His frequency as it were. I fear my mind being trapped and captured by nanno-second images and ultra-high barrages of information which my mind was never equipped to manage. Indeed, does not 'trapped' mean the same as slavery?

We are there, we are there, on the cusp of mental destruction. The God-mind is fast disappearing, slavery is just around the corner. Einstein quipped once that he feared the day when technology surpassed our social aptitudes. Then, he said, we would have a generation of idiots.

Indeed, He is extremely low frequency vis-a-vis the account on Mt. Horeb with Elijah. There He was not in the high-frequency lightning, earthquakes nor wind, but in the still small voice.

"Still" in the Hebrew means quiet, calm, silence, still. The meaning is also conveyed by the word, whisper. The word "small" means crushed, small or thin. None of these fit into high-frequencies; to the contrary, they signify a peaceful state.

Can we at least *consider* these things?
